PROFESSIONAL SUMMARY

DevOps and platform engineer with 7+ years across enterprise and healthcare, specialising in CI/CD pipelines, DevSecOps automation and self-service developer tooling. At Jaguar Land Rover I owned the security quality-gate on an internal developer platform, hardening golden-path templates and building automated, secure delivery pipelines that cut new-project setup from days to minutes. Strong in pipeline automation, security scanning, IAM least-privilege and observability, with hands-on cloud across AWS (Health Innovation Labs, TCS) and GCP (Jaguar Land Rover), plus Infrastructure as Code (Terraform) and containerisation (Docker). Twice interim tech lead. Google/Udacity NanoDegree winner (top 2% EMEA); working towards AWS certification.

CORE SKILLS

- **CI/CD & automation:** GitHub Actions, GitLab CI, pipeline design, build/test/deploy automation, quality gates, release management, immutable versioned deploys & rollback
- **DevSecOps & security:** Snyk, Trivy, Semgrep, SonarQube, dependency & SAST scanning, secrets management, OWASP-aligned patterns, IAM least-privilege & blast-radius reduction, OAuth/RBAC
- **Developer experience:** golden-path service templates, self-service tooling, Backstage internal developer platform, policy-as-code, documentation & runbooks
- **Infrastructure as Code:** Terraform, containerisation with Docker, GKE/Kubernetes workloads
- **Cloud:** AWS (hands-on at Health Innovation Labs & TCS; certification in progress), GCP (hands-on at JLR), managed databases (RDS, Postgres)
- **Observability:** Grafana, logging, alerting, incident response, post-incident reviews
- **Also:** React, Next.js, TypeScript, Node.js, Python/FastAPI — full-stack context for the platforms I support

EXPERIENCE

Jaguar Land Rover — DevOps / Platform Engineer (interim tech lead ×2)

Manchester · Dec 2022 – Apr 2025 · Internal Developer Platform (Backstage)

- Owned the security quality-gate: reviewed, hardened and approved 25+ golden-path CI/CD service templates (React, Node.js, Python, Go, GKE, Pub/Sub, BigQuery) into production, so new projects started with secure, compliant pipelines by default.
- Built policy-as-code into templates (uniform bucket access, public IAM bindings stripped, CMEK + retention by default), automating secure provisioning and cutting new-app setup from days to minutes.
- Reduced IAM blast radius: replaced primitive project-wide roles on service accounts with scoped custom roles and swept existing repos — cutting security review from days to minutes.
- Introduced DevSecOps scanning (Semgrep, SonarQube, Trivy, Snyk) into CI/CD with quality gates that blocked insecure or failing builds from merging.
- Improved observability with Grafana dashboards, reducing debugging time ~50%; contributed to incident response and post-incident reviews.
- Interim tech lead ×2: led a small team to deliver a time-boxed, high-value event API (Salesforce + third-party frontend), managing senior stakeholders and shipping on schedule.

Health Innovation Labs — Full-Stack / DevOps Engineer

Dublin · May 2025 – present · Healthcare SaaS

- Built Playwright end-to-end tests into CI/CD with quality gates, protecting releases from regressions on dependency upgrades.
- Implemented OAuth, RBAC, session management and OWASP-aligned secure API patterns across services.
- Led vendor evaluation for e-signatures and integrated a third-party provider, cutting cost ~72% and improving completion 40% → 85%.
- Delivered an event-driven service (NestJS, GraphQL, DDD) and an AI-assisted summarisation feature with output validation before reaching users.

Tata Consultancy Services — Software / DevOps Engineer

London · Apr 2019 – Jan 2022 · Enterprise retail (incl. M&S)

- Delivered enterprise e-commerce platform changes for major retailers; built DevSecOps CI/CD pipelines with security and dependency scanning.

Sagittarius Agency — Software Engineer

London · Jan 2022 – Nov 2022

- Built React frontends for finance, retail and e-commerce clients under tight deadlines.

EDUCATION & CERTIFICATION

- AWS Certified AI Practitioner — in progress
- Google / Udacity NanoDegree — Front-End Web Development & Design (top 2% EMEA)
- Technological University Dublin — BSc (Hons) Digital Technology, Design & Innovation
