MARTHA TAYLOR

Full-Stack Engineer · Platform Engineer · AI Systems Engineer
LinkedIn · Email · UK (remote-first, open to hybrid)

PROFESSIONAL SUMMARY

Full-stack and platform engineer with 7+ years across enterprise and healthcare, shipping production features end-to-end and building the internal platforms on which other teams build. Twice acted as interim/informal Tech lead at JLR, owning delivery, stakeholders and a small team under pressure. Recent focus on AI-assisted product features and agentic workflows: built an LLM clinical-summarisation feature, and now building agentic tool-calling pipelines and using Claude Code as part of daily delivery. Strong on Node.js/NestJS, React/TypeScript, event-driven architecture and DevSecOps. Google/Udacity NanoDegree winner (top 2% EMEA).

CORE SKILLS

- **Leadership & Delivery:** interim tech lead, cross-functional delivery (remote + onsite), stakeholder management & exec presenting, mentoring, design-thinking facilitation
- **AI & Agentic:** LLM-assisted features, prompt design, agentic tool-calling loops, streaming AI output, Claude Code, GitHub Copilot, output validation/guardrails, n8n workflows
- **Frontend:** React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind, Accessibility
- **Backend:** Node.js, NestJS, Python, GraphQL, REST, Redis, PostgreSQL
- **Cloud & DevOps:** AWS, GCP, Docker, Kubernetes, Terraform, CI/CD (GitHub Actions), Bash
- **Testing:** Playwright, Cypress, Jest (E2E & automation), Postman API testing
- **Security:** OAuth, RBAC, OWASP Top 10, Snyk, Trivy, Dependabot, SonarQube
- **Observability:** Grafana, Datadog, SonarQube, logging & alerting
- **Architecture:** Microservices, Event Driven, DDD, API integration, workflow automation

EXPERIENCE

Health Innovation Labs — Full-Stack / Platform Software Engineer

Dublin · May 2025 – Healthcare SaaS for professional-services management.

- Built and tested an AI-assisted clinical call-summarisation feature (ChatAdvisor) on LLM workflows, with a focus on output reliability (structured/grounded output, validation before it reached clinicians); cut documentation time by 3–4 minutes per call.
- Built Playwright E2E into CI/CD with quality gates; integrated Shopify across subsystems with data-integrity safeguards. Security governance/quality gate across the platform. Knowledge sharing across the team
- Designed and delivered an event-driven prescription service in NextJS, NestJS, GraphQL + DDD, supporting real-time workflow automation.
- Led competitor & compliance analysis for e-signatures; integrated DocuSeal, cutting cost ~72% vs DocuSign (£20k+/yr) and improving prescription completion 40% → 85%.
- Implemented OAuth, RBAC, session management and OWASP-aligned secure API patterns across services.

- TDD documents created; API design documents and rollout plans through upgrades improved and documented. Mentoring juniors and building a flat knowledge-sharing structure and culture.

Jaguar Land Rover — Full-Stack / Platform Engineer

Manchester · Dec 2022 – Apr 2025 Internal Developer Platform (Backstage) for self-service tooling. **Acted as an interim/informal tech lead twice.**

- **Stepped up when the principal went off sick:** led a team of two to deliver the Special Vehicles Event Services API for a high-value, time-boxed event — integrating Salesforce (backend) with a third-party frontend, validating and securing the data flow, and managing senior stakeholders. Shipped on time despite both engineers being new to the stack.
- **Built and merged a new platform team** (TUPE merge of TCS + JLR engineers + product owner); structured the backlog, mentored incoming engineers, ran cross-functional delivery (remote + onsite), and presented to solution/senior solution architects.
- Delivered 25+ reusable golden-path templates (React, Node.js, Python, Go, GKE, Pub/Sub, BigQuery); automated GCP workflows, cutting new-app setup from days to minutes.
- **Security governance/quality gate:** baked policy-as-code into Backstage templates (uniform bucket access, public IAM bindings stripped, CMEK + retention by default); spotted teams attaching primitive IAM roles to service accounts, replaced with scoped custom roles, and swept/migrated existing repos — materially reducing IAM blast radius and cutting security review from days to minutes.
- Introduced DevSecOps scanning (Semgrep/SonarQube, Trivy, Snyk) and CI/CD quality gates (Cypress); improved observability with Grafana (~50% less debugging time).
- TDD documents created; API design documents and rollout plans through upgrades improved and documented. Mentoring juniors and building a flat knowledge-sharing structure and culture.

Sagittarius Agency — React Software Engineer

London · Jan 2022 – Nov 2022

- Built scalable React frontends for finance, retail and e-commerce clients; usability, performance and conversion improvements under tight deadlines.

Tata Consultancy Services — Full-Stack / Platform Software Engineer

London · Apr 2019 – Jan 2022

- Delivered enterprise e-commerce platform changes for major retailers, including. M&S; A/B testing with optimisation leads; frontend + backend across large-scale retail systems; built DevSecOps CI/CD pipelines with security/dependency scanning.
- TDD documents created; API design documents and rollout plans through upgrades improved and documented. Mentoring juniors and building a flat knowledge-sharing structure and culture.

EDUCATION

- **Google / Udacity NanoDegree** — Front-End Web Development & Design (top 2% EMEA)
- **Technological University Dublin** — BSc (Hons) Digital Technology, Design & Innovation
- **Dublin Business School** — Digital Marketing Certificate (Hons)
