MARTHA TAYLOR

Platform Engineer · DevSecOps · Internal Developer Platform

UK (remote-first, open to hybrid) · LinkedIn · Email

PROFESSIONAL SUMMARY

Platform and full-stack engineer with 7+ years across enterprise and healthcare, specialising in internal developer platforms, CI/CD, and DevSecOps — building the secure, self-service tooling other teams ship on. Twice interim tech lead at Jaguar Land Rover, owning delivery, stakeholders and a small team under pressure. Deep on Infrastructure as Code, security hardening (IAM least-privilege, policy-as-code) and observability; comfortable across React/TypeScript and Node/Python service work. Google/Udacity NanoDegree winner (top 2% EMEA); studying AWS certification.

CORE SKILLS

- **Strong — Platform & DevSecOps:** Terraform / IaC, CI/CD (GitHub Actions, GitLab CI), golden-path service templates, policy-as-code, IAM least-privilege & blast-radius reduction, DevSecOps scanning (Snyk, Trivy, Semgrep, SonarQube), quality gates
- **Strong — Cloud & Ops:** GCP, AWS, Docker, container workloads on GKE/Kubernetes, observability (Grafana, Datadog), logging & alerting, runbooks & documentation
- **Strong — Security:** OAuth, RBAC, session management, OWASP Top 10-aligned API patterns, object-level authorization
- **Working — App development:** React, Next.js, TypeScript, Node.js/NestJS, Python/FastAPI, GraphQL, REST, PostgreSQL, Redis, event-driven / DDD
- **Working — AI-assisted delivery:** LLM-assisted product features, output validation/guardrails, prompt design, using AI coding tools in daily delivery
- **Leadership:** interim tech lead, cross-functional delivery (remote + onsite), stakeholder & exec presenting, mentoring

EXPERIENCE

Jaguar Land Rover — Platform / DevSecOps Engineer (interim tech lead ×2)

Manchester · Dec 2022 – Apr 2025 · Internal Developer Platform (Backstage) for self-service tooling

- Owned the security quality-gate on the platform: reviewed, hardened and approved 25+ golden-path service templates (React, Node.js, Python, Go, GKE, Pub/Sub, BigQuery) into production, ensuring new projects started with secure, compliant defaults.
- Reduced IAM blast radius: identified teams attaching primitive IAM roles to service accounts, replaced them with scoped custom roles, and swept and migrated existing repos — cutting security review from days to minutes.
- Baked policy-as-code into Backstage templates (uniform bucket access, public IAM bindings stripped, CMEK + retention by default), automating secure GCP provisioning and cutting new-app setup from days to minutes.
- Introduced DevSecOps scanning (Semgrep, SonarQube, Trivy, Snyk) and CI/CD quality gates; improved observability with Grafana (~50% less debugging time).
- Stepped up as interim tech lead when the principal went off sick: led a team of two to deliver the Special Vehicles Event Services API for a high-value, time-boxed event — integrating Salesforce with a third-party frontend, securing the data flow, and managing senior stakeholders. Shipped on time despite both engineers being new to the stack.
- Merged a new platform team (TUPE merge of TCS + JLR engineers + product owner); structured the backlog, mentored incoming engineers, and presented to senior solution architects.

Health Innovation Labs — Full-Stack / Platform Engineer

Dublin · May 2025 – present · Healthcare SaaS

- Implemented OAuth, RBAC, session management and OWASP-aligned secure API patterns across services.
- Led competitor & compliance analysis for e-signatures and integrated a third-party vendor (DocuSeal), cutting cost ~72% vs DocuSign (£20k+/yr) and improving prescription completion 40% → 85%.

- Built Playwright E2E into CI/CD with quality gates; integrated Shopify across subsystems with data-integrity safeguards.
- Designed and delivered an event-driven prescription service (NestJS, GraphQL, DDD) supporting real-time workflow automation.
- Built an AI-assisted clinical call-summarisation feature on LLM workflows, focusing on output reliability (structured, grounded output validated before reaching clinicians); cut documentation time 3–4 minutes per call.

Tata Consultancy Services — Full-Stack / Platform Engineer

London · Apr 2019 – Jan 2022 · Enterprise retail platforms (incl. M&S)

- Delivered enterprise e-commerce platform changes for major retailers; built DevSecOps CI/CD pipelines with security and dependency scanning; A/B testing with optimisation leads.

Sagittarius Agency — React Software Engineer

London · Jan 2022 – Nov 2022

- Built scalable React frontends for finance, retail and e-commerce clients under tight deadlines; usability, performance and conversion improvements.

EDUCATION & CERTIFICATION

- AWS Certified AI Practitioner — in progress
- Google / Udacity NanoDegree — Front-End Web Development & Design (top 2% EMEA)
- Technological University Dublin — BSc (Hons) Digital Technology, Design & Innovation
